— info

At Medoffice, we have a 4000m² production facility that is certified to ISO Cleanroom standards, complete with highly skilled technical staff, Microbiology and R&D Labs. As one of the largest producers of patient care products, we export to over 80 countries worldwide and have over 60 local dealers in Turkey.

The Medoffice Ethos, since its foundation has been to improve patient care, there by continuously developing and researching new solutions to prevent infections and cure skin ailments. With this motivation our Management and R&D team are keenly investing resources to innovate products that can improve clinical outcomes.

Given our global reach, our researchers are dedicated and focussed on making scientific advancements & breakthroughs so as to raise the standard of care and make a difference to the thousands of patients we touch daily through our products.

Being fully aware that our products have a direct impact on the lives of others, we strive to enhance our own quality standards, efficiencies and product offerings. The investment of our efforts today would result in a Healthier tomorrow.

Bedridden And Intensive Care Patients

Pressure (decubitus) ulcers occur in approximately 4% of hospitalized patients. Patients in intensive care units are particularly at risk because they are relatively immobile. Prolonged pressure, shearing forces, friction, and moisture are all etiological factors. Pressure ulcers may be complicated by infection and, rarely, carcinoma. Prevention depends on excellent nursing care that concentrates on meticulous skin care and relief of pressure. (Lorin E, Karin F, 1989). To prevent this kind of situations there are some processes to follow;

- Keeping skin clean and dry.
- Avoiding any products that dry out your skin. This includes many soaps, body washes and talcum powder. Asking for skin cleansers that are non-drying.
- Using a water-based moisturizer daily.
- If there is a risk of pressure sores, a nurse will change your position often, including during the night.
- Always use any devices given to you to protect your skin from tearing and pressure sores. These may include protective mattresses, seat cushions, heel wedges and limb protectors.
- Following a regular diet. Sitting out of bed to eat if its possible. With bedridden patients situations is more risky. Since their mobility is limited, their skin care and diets are very important. (Health, 2018).

Urinary Incontinence

Urinary incontinence means , any uncontrolled (incontinence) leakage of urine. It's a very common and disstressing problem. It has been identified as an important issue in Geriatric Health Care. (Ackley, 2010).

Urinary Incontinence Associated Dermatitis

Many people who have incontinence will experience incontinence-associated dermatitis (IAD) at one point or another. This is especially common in older adults. Incontinence refers to patient body's inability to control the release of urine or stool. IAD occurs when the protective barrier created by skin is damaged. Exposure to the bacteria in urine or stool can result in painful symptoms, such as burning and itching. The condition primarily affects the area around genitals, thighs, and abdomen. IAD may also be referred to as perineal dermatitis, irritant dermatitis, moisture lesions, or even diaper rash, though these are all different conditions. (Healthline, 2018).

Preventions For IAD

In addition to immune related and thermoregulation functions, the skin acts as a barrier between internal and external environments. It protects the body from exposure to irritants or toxic metrials in the environment, while preventing excessive loss of fluids and electrolytes from the internal environment (Gray, 2010).

Prevention and management of IAD is based on two principles of care: avoiding contact between urine or stool and the skin, and providing a structured skin care regimen that protects the skin from the damaging effects of urinary and/or fecal incontinence. Management of urinary or fecal incontinence in the older person begins with non-invasive behavioral interventions such as diet and fluid management or toileting techniques, and may progress to pharmacologic or surgical interventions in selected cases.

Instituting a structured skin care regimen is essential because it protects vulnerable skin in the person with chronic incontinence that may not be able to achieve complete continence using available interventions, or the person with acute onset incontinence associated with a systemic infection or other disorder such as a stroke. A structured skin care regimen comprises three essential elements: cleansing the skin, application of a moisturizer, and application of a skin protectant (Beeckman, Woodward and Gray, 2011; Gray et al., 2007; Gray et al., 2012).

SHAMPOO CAP / WASH CAP

Med-Cover Shampoo Cap is designed for cleaning and hair care for the head area of inpatients, bedridden patients, and patients who require special care, such as intensive care patients. It removes dead cells from the hair with a special formulation while keeping the scalp healthy with Vitamin E and Provitamin B5. As in ordinary Shampoo Caps, it does not contain Latex, Lanolin, or Alcohol, so it is suitable for common use and allows for comfortable and safe care operations. Hair cleaning can be completed in a short time, such as 3 minutes, while effectively removing the remains like EEG gel, blood, and iodine from the scalp.

WASH GLOVES WITH BARRIER CREAM

Med-Cover Wash Gloves with Barrier Cream provides comfortable and safe care opportunities for bedridden and intensive care patients. Thanks to a special formulation containing 3% Dimethicone, the gloves clean the skin, soften it and create a barrier layer. The content of Vitamin E and Provitamin B5 nourishes the skin and specially formulated Phospholipids helps to recover the damaged cells, which lose water. The product is made from soft tissue with three-dimensional special fabric that prevents skin from irritation and easy to use with the structure of the glove form. With a pleasant smell, the wash gloves make the patient feel better after cleaning.

BARRIER CREAM PERINEAL WIPE

Especially for patients who use diapers, this product is recommended after a diaper change. As a result of cleaning the perineal area with highly basic products such as soap and water, the acid layer in the region (protective barrier layer) can be deformed. The skin that deforms the acid layer dries out. Dry skin causes cracks and fissures, creating an ideal environment for the development of urinary infection ruins in the area. Med-Cover Perineal Wipe takes up the role of a degraded natural barrier layer with 3% Dimethicone in the content. This layer provides breathability and blocks the transmission of liquid. The product is specially designed for the perineal region and will not cause any damage around the area with its soft tissue texture. With the clearance in the area of stools and urine and with supporting elements, skin damage is seen to return to its natural structure. With special ingredients like Chamomile Extract and Vitamin E in addition to Phospholipids to moisturize dry skin, it offers comfortable cleaning and maintenance facilities for skin that has lost its elasticity.

BARRIER CREAM CLOTHS

Med-Cover Barrier Cream Cloths create a barrier layer on the skin with its special formulation while also meeting the daily cleaning needs. Clinical trials prove that moist skin protects the integrity of the skin better. Because there is a capability of elasticity. Regular products eliminate elasticity capabilities, which cause the drying of the skin, creating cracks then lead to disintegration. Med-Cover Barrier Cream Cloths with 3% Dimethicone in content help protecting the skin from external factors by creating a barrier layer. Aloe Vera, Vitamin E, Chamomile Extract and Pro Vitamin B5 allows the skin to be healthier. With Phospholipids in the content, it also helps in the recovery of water lost from the skin.

ZINC OXIDE BARRIER CREAM

Med-Cover Barrier Cream is used to protect hospitalised patients and patients wearing adult diapers from irritations and redness that may occur at pressure points. It keeps dermatitis from forming on the skin as a result of incontinence. In hospitalised patients, Med-Cover Barrier Cream helps prevent irritations caused by positioning. It prevents maceration at the wound's edge, as well as wound growth, and contributes to wound healing. It has a powerful skin-moisturizing formula and a concentrated cream form that is resistant to water. While Med-Cover Barrier Cream does not prevent plaster adhesion to the skin, it does make it easier to remove.

TRANSPARENT BARRIER CREAM

Med-Cover Transparent Barrier Cream offers a smooth, viscous, greaseless, and fragrance-free moisture barrier. It creates a mechanical skin interface and offers the skin a unique, long-lasting protection, such as against maceration. It also resists wash off and therefore does not need frequent reapplication. It can be used to protect the skin from major factors like:

- Wound exudates
- Urinary and faecal incontinence (chronic or acute)
- Digestive fluids
- Friction and shearing forces

Contains:

Cera Alba forms flexible protective layers on skin and enhances adhesion of formulations. Shea Butter has been designed to keep your skin feeling soft, smooth and hydrated. Vitamin E Acetate protects the cells against free radicals and prevents the peroxidation of body fats. Panthenol has many beneficial uses to improve skin appearance because of its humectant properties. It relieves oxidative stress symptoms such as redness, lines, and callouses. Polymol Ipp is a non-oily ester, emollient and has good spreadability, providing a silky touch to products for skin, hair, and bath. Cocoa Butter softens and smoothes the skin. Glycerin, a humectant, attracts water and thus provides moisturizing and healing properties to the skin. Sweet Almond Oil is rich in oleic and linoleic fatty acids and contains vitamins A, B1, B2 and B6 as well.

STING-FREE BARRIER FILM SPRAY

Med-Cover Barrier Film is 100% silicone based. It forms a long-lasting transparent barrier layer which can dry in a maximum of 30-45 seconds. This transparent barrier layer is long lasting, breathable, durable and provides full protection against potential damage. The plaster, ostomy adapter, which will be used after the product is applied, does not prevent wound care products from adhering. It is neither toxic nor irritating.

Ingredients:

Polydimethylsiloxane,
Cyclopentasiloxane,
Trimethylsiloxysilicate,
Phenyl Trimethicone.

RASH PREVENTER BABY WIPES

Med-Cover Rash Preventer Baby Wipes are designed for the sensitive bodies of babies, and it can be used safely in daily cleaning. It contains nourishing, moisturizing, and protecting agents and with this special formulation, you do not need to use rash preventing cream after a diaper change.

Dimethicone has emollient, skin conditioning, and skin protecting properties. It forms a strong barrier on the skin, which can help reduce water loss across the skin surface, but it also helps protect the skin from external factors (body fluids).

Vitamin E is known for its antioxidant properties, which help reduce free radical damage. It helps with the overall health of the scalp and hair. It also reduces the acute and chronic skin damage caused by UV irradiation.

Provitamin B5 has excellent anti-aging properties because it soothes, softens, and moisturizes the skin while also reducing the appearance of fine lines and wrinkles. Its exfoliating properties fight free radicals and promote new skin cells.

Pro-Vitamin B5 helps keep the skin soft, smooth, and healthy. It also has an anti-inflammatory effect that can help stimulate the skin's healing processes.

Glycerine is an excellent moisturizer and humectant that protects the water balance and skin while eradicating the itch.

*A-Safe Rinse-Free Ready-to-Use
Bath Sponges: The Solution for
On-the-Go Hygiene and Patient Care!*

Whether you are out for camping, hiking or in a hospital setting, these sponges are your go-to solution for quick and effective skin care. Perfect for patients who are post-surgery, bedridden, or in intensive care, they provide a convenient way to clean and refresh the skin. So whether you're on the go, or need a solution for patient care these sponges offer an alternative to traditional bathing methods, eliminating the need for water.

The fibrous sponge structure works to both cleanse and purify the skin, removing dead skin cells as you scrub. Infused with nourishing and moisturizing ingredients like Vitamin E, Provitamin B5, Chamomile Extract, Dimethicone, Allantoin, and Aloe Vera, these sponges offer a complete cleansing and skin care experience in one. Simply lather the sponge, scrub your body, and if you prefer dry with a towel for a refreshed, revitalized feel.

We are also offering altered formulation **A-Safe Antibacterial Rinse-Free** Ready-to-Use Bath Sponge. It is an essential product for those seeking ultimate protection, especially patients in intensive care. With **2% Chlorhexidine (CHG)**, a highly effective antiseptic, it provides superior defense against a wide range of microorganisms including bacteria, fungi, and viruses. Not only does it effectively target both gram-negative and gram-positive bacteria, but it also nourishes and hydrates the skin instead of drying it out like alcohol-based antiseptic cleansing products. Get ready for a clean and healthy bathing experience with this convenient solution to stay protected from environmental germs.

FOOT CARE CREAM
'FOR DIABETICS'

Med-Cover Foot Care Cream is prepared for foot care and protection. It effectively protects and moisturizes dry, cracked heels and hard feet. With an effective combination of vegetable oils and vitamins, it softens the skin of the feet and helps prevent cracks. Dry feet, known as Xerosis in patients with Type 1 and Type 2 diabetes, lead to autonomic neuropathy, impaired sweat production, peripheral erythema, edema, atrophy, and even aggravation of dry skin in the future. Dry skin, if left untreated, may develop fissures with a risk of ulceration. Also, when the foot is subjected to increased pressure and friction, the risk of developing a foot ulcer increases. Ulcers must be avoided because they not only cause significant discomfort and problems for the patient, but they can also result in amputation as the most serious consequence. When calluses and fissures increase, ulceration occurs. Regular use of a moisturizing cream formulated according to the needs of the diabetic foot can prevent this situation. For this reason, Med-Cover Foot Care Cream is an important supportive product for diabetic foot care.

LICE CAP

NEW AND UNIQUE SOLUTION FOR LICE TREATMENT
CE MARKED CLASS I M.D

What is a head lice cap ?

A thick cap that is impregnated with essential oils designed to eradicate head lice. It looks and feels just like a regular shower cap.

The Med-Cover lice cap is different from mainstream head lice products as it doesn't contain the neurotoxins and pesticides that are often used to kill head lice. These chemicals (such as Permethrin) actually a common garden pesticide. Who would want that on their head?

Instead, the Med-Cover lice cap contains natural ingredients , such as Tea Tree Oil , Eucalyptus Oil, Aloe Vera and Lavender oil.

Does it work ?

Yes , it really does. We took a different approach and with it we've achieved 99.9% succes rate with it.

How does it work ?

The essential oil compounds pass through the cuticle of the louse and up to their trachea, causing death by suffocation. The reality is that there is no 'nice' way to get rid of lice but only two options: using chemicals that can harm you, your hair, and your scalp, or the Med-Cover method, which uses natural ingredients to kill the lice with no long-term impact on you or your hair.

5 BENEFITS OF MED-COVER LICE CAP

Very easy to apply. The patented formula is inside a shower cap. No dripping, no water and

Results are visible within just 45 minutes. The head lice die from suffocation of the natural oils present in the cap. The natural oils present in the cap coat the lice, causing their suffocation and

There are no toxic chemicals, no harsh materials and no insecticides in our special formula. The Med-Cover head lice cap is a natural treatment that uses only Essential Oils such as Tea Tree Oil, Eucalyptus Oil , Aloe Vera and Lavender Oil.

The natural oils help to heal the scalp from painful bites and the results of scratching and itching. The soothing Aloe Vera and Eucalytus oil coat and clean the scalp with just one

Following treatment, hair is clean and grease free, with no pesticides, silicone or plastic present in the scalp.

Contains:

STEP BY STEP INSTRUCTIONS

Establish if there are any live head lice present, if you find anything check all of the family and inform close friends.

- 1  Place the cap over your hair, making sure you have covered all of your hair and scalp down to the nape of your neck and the back of your ears.
- 2  Massage your head through the cap, working the oil through the strands of hair and down to the scalp.
Important: Spend at least 2 minutes on this, ensuring that all your hair is coated with the oils.
- 3  Leave in head for 10 minutes without touching or moving the lice cap.
- 4  After the 10 minutes wait is up... **Repeat step 2 and 3 a further 3 times.** In total you should allow 40 minutes of resting time for the natural oils to work down to the scalp.
- 5  Use the lice comb provided to methodically work through your hair to remove the dead lice and their eggs. Take your time with this as it's essential that you remove all the eggs that you can see. **Repeat step 5 daily for the next 3 days.**

After a further 2 weeks, then **repeat the whole process again** with the second cap to ensure that no lice have survived. It's unlikely that you will feel the need to repeat the process but you must do it anyway - as one nit that was left behind could cause a reinfestation.

ADJUSTABLE FIRST AID CERVICAL COLLAR

MED-COVER Adjustable First Aid Cervical Collar is suitable for immobilization of the head and neck to prevent further injury to the casualty. It is highly necessary to avoid compression of the cervical rachis for a polytraumatized patient during moving or transportation. Due to a simple and precise method of measuring with fingers, the MED-COVER Adjustable First Aid Cervical Collar provides an ideal size selection. It has an X-ray compatible adjustable rip-apart closure. The one-piece design enables efficient storage in small spaces.
